

# All I need is the air that I breathe...

**In nature, negative ions are produced that neutralize the surplus positive ions in the air and by doing so, ensure that the air is kept fresh and clean.**

If there is an excess of positive ions in the air, the production of the stress hormone *serotonin* is increased. This results in: tension, headaches, insomnia and stress. Negative ions reduce stress - scientists have discovered that the amount of serotonin in the blood was reduced by up to 80% when the air was negatively charged.

## **The Ionizer...**

- ... makes sure that the air in the room is kept fresh and healthy**
- ... alleviates respiratory problems caused by illness and helps with asthma and allergies**
- ... produces negative ions such as those you find in woods and at waterfalls**
- ... reduces the amount of serotonin in the blood**
- ... has a two-speed fan**
- ... has a washable filter**
- ... is user-friendly and especially suitable for people who are not technically minded**

Basically, the *Ionizer* freshens the surrounding air by increasing the number of negative ions. Such impurities as cigarette smoke, greasy fumes from the kitchen, bacteria floating in the air, powdered insecticides, hairs from pets and pollen are filtered out of the air. Negative ions immediately have a positive effect on asthma, bronchitis, hay fever, migraine, allergies and other complaints.

You can even leave your *Ionizer* on overnight in your bedroom - it will not keep you awake because it hardly makes any noise!

GLOBALMIND's *Ionizer* produces every second 280,000 ions per cm<sup>3</sup> and is effective in an area of approx. 25 cm<sup>2</sup>.
